Horizontal Architectural Details

This section highlights Orsted's fiber cement trims and reveals in a variety of standard horizontal conditions. We have made assumptions that are based on a number of standard project conditions that are not all encompassing and can be customized on a project basis.

We have primarily shown horizontal details at a variety of abutting and overlapping conditions. Typically, a horizontal trim is installed continuously and is designed to overlap the face of the vertical components providing consistent and clean joints at intersecting conditions.

Orsted believes that the impact of an error increases substantially as an error moves from the digital environment to the jobsite. We would love to help save your project **Time and Money** by consulting on project specific details and conditions.

Horizontal Architectural Details

Description: Horizontal with 1/4" panel clearance and 3/8" exposed flange

Siding Type: 5/16" fiber cement panel

Part Number: FbC-P-Hoz

Description: Horizontal with 1/2" panel clearance and 3/8" exposed flange

Siding Type: 5/16" fiber cement panel

Part Number: FbC-P-Hoz

Description: Horizontal used as a starter with 1/4" panel clearance and 3/8" exposed flange

Siding Type: 5/16" fiber cement panel

Part Number: FbC-P-Hoz

Description: Horizontal used as a starter with 1/2" panel clearance and 3/8" exposed flange
